REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art, either singly or in combination, fails to anticipate or render obvious, method, including the limitations of measuring a height of a columnar spacer formed on one of two substrates and dispensing liquid crystals on at least one or the other substrate with an optimum quantity decided by a measured height of the spacer based on a predetermined relationship between quantity to be dispensed and the height of the spacer in combination with the other limitations of independent claim 7.

Further, the prior art, either singly or in combination, fails to anticipate or render obvious, method, including the limitations of measuring a dispersing density of spherical particles dispersed on one of two substrates, and dispensing liquid crystals on at least one or the other substrate with an optimum quantity decided by a measured density of spherical particles based on a predetermined relationship between quantity to be dispensed and the density of the spherical particles in combination with the other limitations of independent claim 11.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Election/Restrictions

Newly submitted claims 15-20 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

Claims 7-14, drawn to a method of forming a liquid crystal display, classified in class 349, subclass 189+. Claims 15-20, drawn to an apparatus for dispensing liquid crystal, classified in class 118, subclass 712+. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus can be used to practice a materially different process such as measuring the dimensions (length and width) of the substrate rather than the spacer height or spacer dispersion density.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 15- 20 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Conclusion

This application is in condition for allowance except for the following formal matters:

Cancellation of non-elected claims 15-20.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.
